

## SIO2 Medical Products rebrands as SIO2 Materials Science

- *Name change and new branding reflects the broader scope of solutions and product offerings*
- *Customer base grows beyond medical to include Genetics & Diagnostics, Biotech, and Health & Beauty*

**Auburn, Alabama, November, 2019** – SiO2 Medical Products today announced that it has changed its name and brand to SIO2 Materials Science.

- Customer base has growth beyond the medical areas to now include, Biotechnology, Genetics, Diagnostics, Consumer Products, and Health & Beauty
- Innovative materials science technology provides benefits which allow companies across various industries to bring their innovation to life

SiO2, a privately-owned, advanced materials science company, has created a patented technology platform which incorporates a thin, transparent, silicon-based barrier coating composed of organosiloxane and silica Nano-layers. This breakthrough coating system uniquely combines the durability and dimensional consistency of plastics with the oxygen barrier properties, low extractables, and pH stability of glass (i.e. quartz).

“We decided to change our name to better identify our history and experience in advanced materials science.” Said Dr. Robert Pangborn, retired head of Research & Development, Dow Chemical Corp and Head of SiO2’s Scientific Board.

“Our customer base has growth beyond medical. The benefits of our technology can be applied really to any industry, so we chose a more appropriate name to reflect the scope of our solutions and products.” said Lawrence Ganti, Chief Business Officer.”

### **About SiO2 Materials Science**

SiO2 Materials Science is a privately-owned U.S. advanced materials science corporation, managed by the same family over the last 100 years always involved in introducing breakthrough disruptive technology. The company has developed a new material which helps companies bring their innovations to life. The company is currently located in Auburn, Alabama close to Atlanta, Georgia and is in the process of developing a new facility located near Basel, Switzerland to manufacture the same six-sigma plus quality in all of its facilities. The company has deep partnerships with leading professors in the leading research universities such as University of California, University of Chicago, MIT, and CalTech.
